

RESEARCH PROJECT

Business translation in the broad sense (including economics, finance, business, etc.) is a professional activity that is often requested in Spain and abroad. This has focused researchers' attention on this type of translation in the first decades of the 21st century.

Translator training centres have also begun including business translation in their curricula. Against this backdrop, the main objective of this project is to conduct a detailed bibliometric analysis on business translation research. The project involves different steps.

First, in order to compile a bibliographic corpus, we will consult various bibliographic databases (BITRA, TSB, TESEO, etc.), as well as instructors and researchers involved in business translation. Second, we will carry out the bibliometric-based study according to various indicators. Third, we will complete one of the most comprehensive bibliographical databases on translation and interpreting in the world, BITRA (Bibliography of Interpreting and Translation), from the point of view of business translation research. The results will help us to map research in business translation and therefore to strengthen and boost research related to this type of translation, which is very frequently practiced in the professional market. The project may have a scientific and technical impact on various national and international groups in the university context. This project brings together not only researchers from the research group "TRADECO (Translation and Economy)" at the University of Alicante, but also researchers from other Spanish and international universities.

Please fill the form at <http://bit.do/faSyS> it will generate an automatic message. Please do not hesitate to send this message to any other head of any centre that could be interested in the results of the project.

Thank you very much in advance and kind regards Daniel Gallego
